Jillian Eccles - Full Stack Web Developer

ABOUT ME

I am a Full Stack Web Developer who loves cats and being bad at video games. I have finally made the move to look for a developer job now as I feel like I have more confidence in my coding ability. I've been around tech since my high school days and I highly enjoyed every second of it. I love to see my projects come alive as I code.

EXPERIENCE

Dev Academy Aotearoa, Remote — *Student Full Stack Developer*

April 2022 - July 2022
  ➔ This was a 15 week full immersion software development bootcamp that mimics a real-life development team as closely as possible.
  ➔ This was an amazing experience where I redeveloped old coding skills that I had lost over time and developed more social skills and new coding skills. I grew more confident in my talking and my coding.
  ➔ Main Languages used: **Knex, React.js, Handlebars, Express, JS, Jest, HTML, CSS**
  ➔ Final Project -The Book Exchange - this is a website that the user can sign in/out and exchange books with other users based on how many tokens they have. They can then gain more tokens by adding books. In this project I individually implemented image uploads by learning **multer**, so that the image then saves into our database and chosen folder to be viewable through-out the website.

Referral Coordination Center, Waikato Hospital — *Casual Administrator*

December 2015 - Current

  ➔ Practiced efficient and accurate data entry of Referrals from GPs and Doctors.
  ➔ Ability to communicate effectively within a team to ensure all parts of the job are covered.
  ➔ Effective problem solving to solve Non-Processed Referrals Audits to maintain current Referrals in our system.

EDUCATION

Dev Academy Aotearoa

April 2022 - July 2022

Online cohort
  ➔ Level 6 Web Development Training Scheme

Bachelor of Science: Majoring, Computer Science

March 2015 – May 2019
The University of Waikato, Hamilton

➜ Completed a Prototype Project for the Hamilton City Libraries
   Mentoring Group. This was done with 5 other people for one of my
   papers. The prototype had a php-myadmin server and was web-based. It
   included a booking system, client history and statistics for tracking.
   I helped manage the group and hand in the completed Documents that we
   needed for each of our milestones. We all helped code a section of the
   prototype. Languages used: SQL,PHP,HTML,CSS.

SKILLS

➜ *React.js* - many hours learning and developing websites for use with
   databases(knex)
➜ *Teamwork* - I enjoy working in a team as I enjoy helping and learning
   about people. This was a very useful skill during dev academy as most
   days were spent doing pair programming as well as weekly projects. I
   also actively seek to help my teammates understand topics they might
   be having trouble with.
➜ *Asking questions* when I don't understand something so that time isn't
   wasted and fully listening to the answer.
➜ *Problem solving* - I am great at solving problems whether it's in code
   or in person. This helped a lot during both my current employment at
   the hospital and dev academy.
➜ *Fast learning* - I am a fast learner and can research and understand
   relevant documentation quickly to implement solutions to the problems
   i need to solve.

Hobbies and Interests

➜ Video games
➜ Board games
➜ Watching videos/movies
➜ Baking - cakes and bread
